

New New New New New New New New

| | | | **DIVA 5**

Known and recognized for its performance and reliability, the DIVA operator has always advanced with the passing years. DIVA4 is now replaced by DIVA5 for more safety, flexibility and versatile use.

DIVA5, as versatile operator, is more compact and reliable. The NAVIBLU control panel which equips the door is very easy to set and to use.

FUNCTIONALITY & SAFETY

DIVA 5 has been equipped with a compact operator that is connected to the NAVIBLU display device. NAVIBLU is a real control board but it is also used for setting and maintenance. New functionalities are included to meet needs of all types in terms of performance and safety, but also of new regulations.

DIVA5 is equipped with a PMR ("People with Reduced Mobility") function complying with the SNFPSPA «Access» recommendations. Thus all types of sound or visual signalling devices can be connected, improving the comfort and safety of users with a visual or hearing impairment.

A passive brake is incorporated into the base card. It can be activated easily in order to brake the doors when opening is triggered by an Intrinsic Mechanical Energy system (French regulation)..

A connector can be connected to the base card for receiving infrared signals from remote controls or IR keys.

The door's Wake up and Reset functions are accessible from the 6 position selector.

The Input/Output cards have 3 security terminals. They provide greater flexibility by allowing NO, NF, Barrier or Curtain type systems to be connected.

In addition to European standards, DIVA 5 complies with the American UL325 standard and adhere to ANSI requirements.

Small and Large openings can be controlled from a switch. This function is particularly useful in hospital environments where medical beds need to pass through.

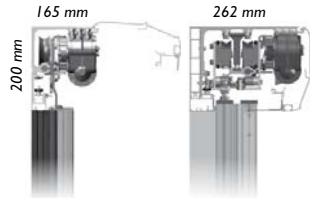

FLEXIBILITY

DIVA5 is equipped with the NAVIBLU graphical interface. This display means that the door can be controlled and set easily by users as by installers.

NAVIBLU is equipped with a wide and bright LCD screen. The menus are illustrated by pictograms, a universal language to all, that are also found on the remote controls so as not to confuse users. Its interface permits instant access to all the functions, via a single navigation button.

DESIGN & VERSATILITY

The restyled casing is softer in shape while retaining the DIVA spirit with its sloping side. DIVA5 exists in Sliding (plane, curved or round), Telescopic or Full break-out version. The telescopic casing is now made of aluminum, making the handling and the installation of this type of door easier.

A few of NAVIBLU'S functionalities

- 6 operating modes
- SO mode / Guard Mode (with Open and Closed locking)
- Access to the secure display device
- Up to 20 keys/ IR remote controls can be stored
- Integrated Reset button
- Diagnostic mode: Analysis of door inputs for more efficient repairs
- Installation on the cover or on the wall
- Navigation by button or by 5 remote control (simplified).
- Port'Com connector
